PROFILE

Senior Software Engineer and Systems Architect with 6+ years building enterprise-grade distributed systems, APIs, and cloud infrastructure. Experienced leading architecture decisions across full product lifecycles — from requirements through deployment. Background in Systems Engineering with hands-on software factory co-founding experience. Currently driving architecture and product decisions at Coverwallet, an Aon company, across high-availability insurance software serving global markets. Seeking senior or architect-track roles in engineering-intensive industries.

EXPERIENCE

Senior Software Engineer — Architecture & Product

Coverwallet, an Aon Company · Mar 2023 – Present

- Lead architectural and product-level decisions on core insurance software serving global enterprise clients; own system design from requirements through delivery.
- Shape UX-driven API contracts and service boundaries, ensuring product behaviour aligns with real user workflows across cross-functional teams.
- Define engineering standards, review system design proposals, and guide mid-level engineers on composable, maintainable architecture patterns.
- Implemented OpenSpec across the engineering workflow — AI-assisted specification, documentation, and test generation that improves code reliability and reduces ambiguity between design and implementation.

Software Engineer — Architecture & Blockchain Data

turtle.xyz (Contract) · Sep 2025 – Feb 2026

- Led frontend architecture across 3 concurrent product interfaces for a DeFi liquidity distribution protocol; established patterns, component structure, and technical standards.
- Built data aggregation pipelines integrating on-chain protocol data across multiple blockchain networks, normalising liquidity, yield, and reward flows into unified APIs.
- Contributed to Go backend services to expose aggregated blockchain data endpoints, working alongside the core protocol team in a US-timezone remote environment.

Software Architect & Co-founder

pqlub · Jan 2021 – Present

- Co-founded and led architecture of a software product studio delivering full-stack applications for university and global enterprise clients.
- Designed composable, containerized systems using Next.js, Node.js, and Docker; responsible for infrastructure, CI/CD, and cloud deployment.
- Operated across the full stack: requirements, system design, implementation, and delivery.

Software Engineer

ACES · Mar 2019 – Feb 2021

- Built web applications and RESTful APIs for a national publishing house using Vue/C#/.NET and Microsoft SQL Server.
- Automated internal editorial workflows, eliminating months of manual administrative work per year and significantly improving operational throughput.
- Delivered an accessible e-commerce platform enabling nationwide book ordering and home delivery.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, C#, Go, SQL, Python (scripting)
Frameworks	Next.js, React, Node.js, .NET, Vue.js
Infrastructure	Docker, nginx, CI/CD pipelines, cloud infrastructure
Databases	PostgreSQL, Microsoft SQL Server, MongoDB, SQLite
Architecture	Distributed systems, REST API design, microservices, system integration, event-driven patterns, cloud-native design
Practices	Technical leadership, system design, code review, cross-functional collaboration

EDUCATION

Systems Engineering in Information Technology

Universidad del Plata · 2017 – 2021

Aeronautical Engineering

Universidad Nacional de Córdoba · 2014 – 2016

LANGUAGES

Spanish (native) · English (professional working proficiency)
